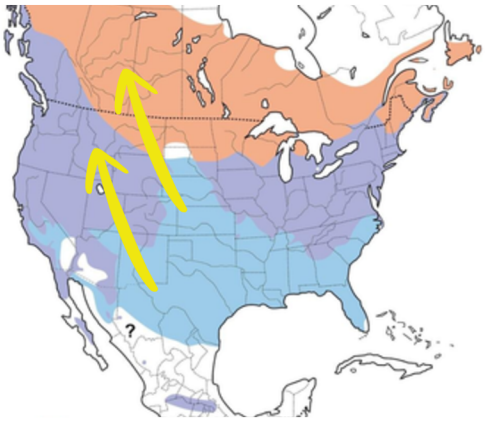
Bird Collision Monitoring

When: Weds, April 22 | 8:30am - 10:00am

Where: UBC Museum of Anthropology 6393 NW Marine Dr., Vancouver



This bird collision monitoring walk will bring together leading experts to examine one of the most preventable threats facing birds today, building collisions. Guided by a local bird-window collision researcher, participants will survey a sample of areas on the UBC campus where glass buildings can pose risks to birds while discussing practical strategies for prevention.

The walk will be joined by several bird-friendly building experts, including Michael Mesure, Executive Director of FLAP-Canada.

The event will offer a rare opportunity to observe real-world monitoring and potentially rescue injured birds, while learning from specialists working at the forefront of bird-friendly advocacy and design.

Paid parking is available in the MOA lot in front of the museum for $4/hour.
